# ■ FIELD FACTS SUMMARY ■

## ☉ **INCREASED PRODUCTIVITY:**

*“The productivity of a soil is in direct proportion to its microbe activity and their population is governed by the rate at which, energy material in **Organic form**, is added to the soil.”* (Prof. S. Wedburg UNI. Connecticut USA)

The Soil biota is continuously working to provide life and health to the soil and can be enhanced by:- **A/. Crop Rotation B/. Minimum Till C/. The addition of Organic Supplements.** (Agri. Soil Pathology, Dept. Prim. Industries)

## ☉ **CROP STRENGTH:**

Chemical/Synthetic fertilizers cannot provide the full complement of nutrients required for optimum health and strength. Organic nutrients supplement the chemicals by supplying Hormones, Carbohydrates and **organic Proteins**, the most important of all nutrients (Protos - First).

## ☉ **ANIMAL HEALTH:**

"ENERGY Solutions" provides **all 4** essential food groups required for livestock health:- **A/. Amino Acids B/. Fatty Acids C/. Vitamins D/. Minerals.** These nutrients when applied to pastures, are digested by livestock, promoting their health and well-being. (Neil A. Campbell's Biology).

## ☉ **ORGANIC CHELATION:**

This is the process whereby chelating agents (ligands) bind to chemical/synthetic elements for more efficient uptake into plants and also reduce leaching to improve the economy of the chemical fertilizers. (Findings of G.T. Morgan & H.K. Drew)

## ☉ **ENERGY Solutions™**

Formulated in 1999 as a supplement for synthetic fertilisers in the fields of Agriculture, Viticulture and large scale Horticulture, certified by APVMA and being the most powerful and complete organic nutrients:-

- \*Activates soil microbes**
- \*Adds to plant strength & nutrition**
- \*Promotes animal health**
- \*Improves uptake of synthetics**

**Increased efficiency of nutrients**

**= Higher Yields & Savings**

Manufactured by **Environmental Organic Nutrients:** ABN20 926 057 287
